OneDrive Restriction Level	3
Fixes	3
System Requirements	11
Upgrading	12

Enhancements and Changes

The following enhancements and changes are part of the ThereforeTM 2024U4 release.

OneDrive Restriction Level

Added an option to set a restriction level for using the Edit in Office functionality in the ThereforeTM Web Client:

- **Everyone:** No dedicated OneDrive account is needed to use Edit in Office. This is the only available mode for OneDrive Personal.
- **Current User:** The user who is currently logged in can use Edit in Office. This mode is available for OneDrive Business.
- **Organization:** Users with accounts under the same tenant as the configured OneDrive Business. If this mode is selected, the user needs to authenticate again when using Edit in Office.

Fixes

The fixes below are included in ThereforeTM 2024 U4 (31.4.0):

ID	Application	Description
128517	TheBase; TheViewer	Fixed an issue where sometimes the 32-bit Therefore TM Viewer could not open larger TIF files.
127895	TheBase	Fixed an specific issue that produced a corrupt XML configuration when exporting a workflow process while the option to save workflow history to a dedicated category enabled in the workflow process configuration.
128713	TheNavigator	Fixed an issue causing the font size to change when the field has a different size font from default.

ID	Application	Description
128598	TheNavigator	Fixed an issue where the text and background color may not be applied to a date field when conditional formatting is used and the field also has a formula defined.
128711	TheCaptureClient	Resolved an error that occurred while scanning documents.
127782	TheViewer	Fixed an issue where comments could not be added to a current Workflow instance if cover-sheet was turned off and the document did not have any files.
128660	TheECopyShareScan	Fixed an issue where after a change made by Yousign, sending documents from a workflow with a template configured would fail.
128297	TheWebAccess	Fixed an issue where editable redundant Fields/Columns could not be overwritten.
126290	TheNavigator	Fixed an issue causing some history entries to not display.
128387	TheBase TheSolution Designer	Hidden index fields will no longer be automatically added to the document title when a new hidden field is added to a category or case-definition. Hidden fields will now be available for selection in the title definition dialog.
128452	TheNavigator	Fixed an issue causing "Shared by me" shared

ID	Application	Description
		links tab to show an error, when a document that had a shared link was deleted.
127313	TheWebAccess	Fixed an issue on the Portal where a misleading auto-append message would appear, stating that a document already exists.
128379	TheBase	Resolved a crash with the Windows Explorer integration when sending a document to Therefore™ and trying to select a date in the calendar control while editing the index data.
128338	TheServer	Fixed an issue where the Process History list did not display the user for changes made via configuration import.
127725	TheViewer	Fixed an issue causing template signers to be removed from the created Envelope when using a template where signers have anchors but the uploaded document does not.
128141	TheNavigator	Corrected an incorrect warning shown when sharing a document without providing a file name.
128265	TheECopyShareScan	Fixed an issue causing operations to fail when using OAuth to authenticate against DocuSign.
127698	TheECopyShareScan	Resolved an issue where under certain

ID	Application	Description
		circumstances it was possible that documents sent to Yousign were not saved back to Therefore™ after they were signed.
128216	TheWebAccess	Fixed an issue where opening and reloading many ReadOnlyViewer instances concurrently led to a memory leak.
128108	TheWebAccess	Added a missing .dll that stops the Therefore™ Web Client from showing an error page on start up.
127890	TheCaptureClient Case Manager TheSolution Designer TheNavigator TheViewer	Users were unable to login to Therefore™ with username and password in certain rare environments. A registry key was introduced to bypass Windows SSO and immediately use username and password authentication. This key can either be "HKEY_CURRENT_USER\Software\Therefore\Client\DisableWinSSO and/or HKEY_LOCAL_MACHINE\Software\Therefore\Client\DisableWinSSO. It needs to be set to a value other than 0 to activate the fix.
127277	TheWebAccess	Fixed an issue causing the Classic Web Client to show the login page when it was embedded in another application.
127860	TheServer	Fixed an issue where the server could crash when

ID	Application	Description
		"Request a comment from the user" was checked for a workflow transition.
127792	TheBase; TheViewer	Fixed an issue causing an improper local time to be shown in the Therefore™ Viewer for .eml files.
127842	TheBase	Fixed an error causing a Call REST request to be sent with a decimal number in an invalid JSON format.
127794	TheSAPNetWeaver	Fixed an issue where the SAP Matching Service might have cleared synchronized redundant field values in some configurations.
124892	TheBase; TheViewer	Solved an issue causing Therefore™ Viewer crashes while adding signature annotations.
126981	TheWebAccess	Fixed an issue where data lookup results would be filtered for the actual input value if the primary field was hidden.
127369	TheCaptureClient	Fixed an issue leading the main window to not receive keyboard events (F9, Shift+F9, Ctrl+R, Ctrl+L) when an index data dialog is in focus.
126637	TheViewer	Fixed an issue in the Therefore™ Viewer causing .jpg images to be misaligned.
127491	TheSolution	Fixed an issue where copying, importing or

ID	Application	Description
	Designer	exporting a workflow could fail when a Call REST task was used, and the request URL contained category field macros, as well as when the task had any secrets.
127317	TheServer	Fixed an issue leading Therefore™ to fail to install on Oracle Database 23ai due to the fact that 'Domain' got a reserved word starting with this Oracle version.
127497	TheContent Connector	Fixed an error that occurred when using spoolfiles with cloud drives.
127312	TheCaptureClient Case Manager TheConsole TheBase TheSolution Designer TheNavigator TheViewer	Fixed a Drag & Drop element that caused functionality problems with eSignature provider Moxis.
126289	TheViewer	Resolved an issue where Therefore™ Viewer failed to display files inside .zip files.
127308	TheServer	Fixed an issue causing old comments to duplicate after adding subsequent comments.
126774	TheServer	Fixed a problem with workflow assignment from

ID	Application	Description
		email address failing in rare conditions.
126549	TheBase	The setting 'As Separate Document' used when archiving multiple files via drag and drop will now be preserved for all subsequent archives.
127084	TheBase	Reverted an unintended change introduced by a prior fix which erroneously disabled server-side document signing on Therefore™ Online.
127431	TheServer	Fixed an issue causing memory leaks when selecting NTEXT columns on Oracle.
127303	TheServer	Fixed an issue with excel files generated with the Document Creation workflow task needing to be repaired when a cell that contained a formula was filled.
124927	TheContent Connector	Fixed an issue with Mailbox Monitoring that could occur when using an IMAP connection and with an email containing a .PDF attachment that is inline.
127281	TheBase; TheViewer	Fixed an issue where a specific .PDF document would render as a blank page in the Therefore™ Viewer when the 'Fit to Width' option is selected.
127327	TheServer	Fixed an issue when using "SetTableValue" in an indexing profile to set a table value that is a primary field where the dependent fields would

ID	Application	Description
		not be fetched.
127237	TheViewer	Corrected an issue causing the scan & insert option to put a new document in the wrong position after scanning.
127144	TheBase	Fixed an issue in the index data dialog where counter fields would not reset when leaving auto-append state.
126331	TheBase	Fixed an issue in the Therefore™ Capture Client that would fail saving to a case category during manual indexing of a multi-page document.
126392	TheServer	Fixed a potential server crash when exporting a configuration.
127164	TheSolution Designer	Fixed an issue where the Therefore™ Solution Designer would have a longer start up time due to redundant loading of Retention Policy objects.
127190	TheContent Connector	Fixed an issue where the Mail.Sent property would return an incorrect time if the Therefore™ Content Connector was not running in the UTC timezone.
127701	TheECopyShareScan	Fixed an error that would occur when sending a document for signing using DocuSign templates without files.
